

The clinical coding audit tool  
that's right for you!

# ResiCAT

The world leading ResiCAT web-based clinical coding auditing tool is the result of 25 years of continuous research, development and refinement in Australian hospitals by Resolutions. ResiCAT will assist hospitals to meet more stringent audit and compliance requirements and get the reimbursement they are entitled to.

ResiCAT expedites highly efficient auditing and identifies the root cause of any coding issues. Data deficiencies are quickly identified ensuring you receive correct funding and the maximum payment of casemix entitlements.

ResiCAT is a highly cost-effective way of auditing your data to maximise your revenue. It allows you to audit your existing coding, documentation and administrative data. ResiCAT should form a part of your auditing program!

## Benefits

- Find missed and incorrect codes to maximise revenue
- 30% more productive audit time through our automated process – more episodes audited means more potential revenue found
- Identify root cause for coding error through our stringent validation process
- Automated process reduces chance of human error and eliminates manual process of spreadsheets
- Audit on-demand
- Monitor coding quality with minimal effort
- Conduct internal auditing at your discretion, in accordance with accreditation and statutory requirements
- Validate current coded data by identifying existing inefficiencies
- Audit any administrative data, coded data or billable items
- No set-up costs or maintenance costs
- Free updates & email technical support
- Cost-effective web-based application

## Features

- Coding sample choice by DRG, code or coder ID with any date range
- Inclusion of a random sampler to extract viable sample population reflecting hospital activity
- Can use any grouper type and/or DRG version
- Hospital defined fields allow you to audit any data outside the regular data extract or audit your documentation at the same time
- Graph your results at the click of a button
- Extensive reporting capabilities, including audit summary, DRG, prefix report to identify HAC
- Audit trail to track the auditor and audit process for verification of the results
- Choice of closed or open audit process
- Validations on all data and audited codes
- Audit of condition onset flags and prefixes
- Ability to change and add error categories to your unique specifications
- Hosted on an Australian server with advanced data security
